## Abstracts

Air-cushioned shoes refer to an air storage cavity that can form an air cushion between the upper part of the sole and the lower part of the sole. The air storage cavity forms a ventilation device with the air inlet and outlet channels provided on the shoe, wherein the air inlet is vertically arranged. At the rear end of the shoe, it communicates with the air storage cavity from top to bottom, and the air outlet pores are horizontally arranged on the upper part of the sole, and the upper and the lower are respectively communicated with the air storage cavity in the shoe.
