Abstracts

Snowmaking is the production of snow by forcing water and pressurized air through a 'snow gun,' also known as a 'snow cannon', on ski slopes. Snowmaking is mainly used at ski resorts to supplement natural snow. This allows ski resorts to improve the reliability of their snow cover and to extend their ski seasons from late autumn to early spring. Indoor ski slopes often use snowmaking. They can generally do so year-round as they have a climate-controlled environment.
