Abstracts

A SNP is a single base pair mutation that occurs at a specific site in the DNA sequence. There are usually two variations, or alleles, with one occurring only in between 1% to 5% of the population. On average, two humans, DNA sequences differ in more than three million positions. In some cases, this variation results in the one minor allele causing or predisposing the individual to have a certain disease or trait. The SNP Genotyping and Analysis industry can be broken down into several segments, Dynamic Allele-Specific Hybridization, Molecular Beacons, SNP Microarrays, etc.
