Abstracts

The goal of any business analytic tool is to analyze data and extract actionable and commercially relevant information that you can use to increase results or performance. Social media analytics is the process of gathering data from social media sites, blogs and other stakeholder conversations on digital media and processing into structured insights leading to more information-driven business decisions and increased customer centrality for brands and businesses. This process goes beyond the usual monitoring or a basic analysis of retweets or 'likes' to develop an in-depth idea of the social consumer. Depending on the business objectives, social media analytics can take four different forms, namely, descriptive analytics, diagnostic analytics, predictive analytics, and prescriptive analytics.

Social media analytics is considered the basic foundation for enabling an enterprises to:

- Execute focused engagements like one-to-one and one-to-many
- Enhance social collaboration over a variety of business functions, such as customer service, marketing, support, etc.
- Maximize the customer experience

Social media is a good medium to understand real-time consumer choices, intentions and sentiments. The most prevalent application of social media analytics is to get to know the customer base on a more emotional level to help better target customer service and marketing.
