Abstracts

Software asset management (SAM) tools automate many of the tasks required to maintain compliance with software licenses, thereby controlling software spending. They facilitate the in-depth analysis of software assets by decoding software license entitlements, automating the collection of software consumption data, establishing independent software vendor (ISV) effective license position (ELP), and optimizing software value delivery and information sharing. SAM tools manage entitlements from enterprise license agreements, purchases and other records to automatically determine and optimize license position against discovered software. Infrastructure and operations (I&O) leaders use SAM tools for managing software entitlement, in lieu of using spreadsheets, due to the rising complexity of software-licensing schemes.
