Software-defined branch or SD branch is an architectural solution that enables enterprises to effectively streamline their WAN and branch by combining the networking and security functionalities into a consolidated software platform with several sets of IP services. The deployment of SD-branch eradicates the need for deploying multiple hardware appliances and related software packages. SD-branch provides a complete set of integrated networking solutions, including Ethernet, routing, SD-WAN, and Wi-Fi. It also offers security solutions such as firewall, web-gateway, IPS etc.. Enterprises can easily deploy SD-branch to solve complex WAN and branch architectural challenges. Deployment of SD-branch offers various benefits such as cost reduction, simplified management, improved IT agility, and a more secure branch.
