Software-Defined WAN or SD-WAN connects enterprise networks, like branch offices and data centers, over a large geographical area.

Traditional WAN connects locations using dedicated MPLS circuits, but this is expensive and does not work well for cloud-based systems. SD-WAN works to deliver a secure and simplified WAN connection by using a combination of traditional circuits (like MPLS, broadband internet, and 4G/LTE) and software-based technology. It can be used to deliver basic WAN connectivity, or premium business services like VPN, WAN optimization, and application delivery control (ADC).
