Abstracts

A solar photovoltaic (PV) tracker is a device that orients solar panels or heliostats toward the Sun. A solar PV tracker is used in solar panels, heliostats, and parabolic troughs to align them in such a position toward the sun so as to collect solar energy in the most optimal angle, thereby increasing the efficiency of PV systems. Fixed-mounted solar panels may lose their efficiency when the Sun passes to the less than optimal angle. A solar tracker system tracks the position of the Sun and moves solar panels such that they align accurately with the position of the Sun.
