Abstracts

Solder paste thickness tester, also known as solder paste thickness tester, English name is SPI (solder paste inspection system), which is used to measure the thickness, area and volume distribution of solder paste (red glue) on PCB board. In the SMT process, it is behind the solder paste printing and plays a role in controlling the quality of solder paste printing. The solder paste thickness tester is divided into 2D solder paste thickness tester and 3D solder paste thickness tester. The solder paste thickness gauge uses the optical principle, scans the solder paste on the PCB board through the laser non-contact three-dimensional scanning technology, and uses the high-resolution digital camera to separate the laser contour. The thickness distribution of solder paste is calculated according to the fluctuation, so as to monitor the printing quality of solder paste.
