## Abstracts

The net weight of carrying these modern equipment prevents soldiers from being agile, mobile and effective in the face of war, especially in difficult terrains, high elevations and fast-paced operations that today's troops experience, the weight on their shoulders is critical. Because of the equipment weight they often tend to leave the lifesaving equipment as it is the heaviest compared to rest thus making them vulnerable to dangers. The key to soldier modernisation market is to reduce the weight of equipment to the lowest possible, without compromising protection and performance, at the time of need.
