Solid-state radar and magnetron are two radar techniques that work in competition with each other. However, solid-state radar is known to be of a higher quality and has a higher operational preference as compared to Magnetron radar. Below are some of the differences between the two. Solid-state radar does not need high maintenance. It is designed with compact parts that do not require “liferated” parts or annual purchase of parts for replacement therefore costs very little as far as maintenance is concerned.
