Abstracts

The solid stream nozzle, also called a solid jet nozzle, is the simplest of all nozzles, being little more than a circular orifice at the end of a funnel. Nevertheless, there are a number of different design variants giving different spray properties. Solid stream nozzles give the highest impact of any spray pattern as the full momentum of the liquid is concentrated into a small area. Droplet size is irrelevant in solid stream nozzles as, unlike all other nozzles, the liquid is not atomised.
