Abstracts

A slight difference from conventional springs is that the springs are irregular, with bending and a large number of complicated angle designs. The manufacturing and processing techniques are relatively more demanding, and the equipment is also more demanding. Generally, it is wound by a computer. Because of the winding angle There are many and many bendings, so the production speed is slow. Because of its complexity, the production and processing of special-shaped springs can often represent the technical level of a company. 1.3 Common uses of special-shaped springs: washing machines, elevators, sock clips, handicrafts, lighting, medical treatment On the device

This report contains market size and forecasts of Special Shaped Spring in global, including the following market information:
