Abstracts

Spectroscopy is the study of interactions between matter (atom or mass) and electromagnetic radiation. It involves the study of different spectrums of light like infrared, ultraviolet, and visible. A spectrometer is an apparatus that measures spectrum and then accordingly calculates the wavelength, frequency, energy, momentum, and mass of the material. Spectroscopy is the study of the interaction between electromagnetic radiation and matter. Electromagnetic radiations comprise a range of radiations/waves such as radio waves, microwaves, infrared, visible light, ultraviolet, X-rays, and gamma rays.
