Abstracts

Sperm bank can be defined as an establishment where the semen is stored in cold conditions for artificial insemination at a later stage. It makes use of cryopreservation freezers to freeze the semen samples. A large number of couples take up artificial insemination to start a family using sperm banks. These institutions also aid individuals with reproductive problems. The sperm banks support the notion of raising awareness among men regarding the reduction in fertility potential and exposure to reproductive hazards from the environment leading to the option of semen storage. It is a practice followed quite often for individuals facing orchiectomy, chemotherapy, vasectomy, and radiation therapy.
