## Abstracts

The body of the split health pot uses high borosilicate glass. The beakers and flasks used in the laboratory are also made of this glass. The health pot must have an all-glass structure, and the pot body is integrally formed, and must not have metal and silicone. The supporting base generally uses a new high-quality pc plastic. This plastic is non-toxic, temperature resistant, fireproof, easy to use, and has a high smoothness. It is also useful for tempered glass. Without any electromagnetic wave, microwave radiation and carbon dioxide pollution.
