SQL Query Builder allows users to visually build select, insert, update, or delete SQL statements against tables. The Query Builder Tool allows the user to select the columns to be used in the SQL statement as well as the SQL operations to be included in the query. It also allows for the selection of aggregate functions and group by clauses and allows for selection of multiple tables for join selects. After selecting the appropriate options and entering any custom values, the Query Builder Tool can generate and/or execute the SQL corresponding to the selections.
