SLAM is an acronym for simultaneous localization and mapping, a technology whereby a robot or a device can create a map of its surroundings and orient itself properly within the map in real time. This is no easy task, and it currently exists at the frontiers of technology research and design. A big roadblock to successfully implementing SLAM technology is the chicken-and-egg problem introduced by the two required tasks. To successfully map an environment, you must know your orientation and position within it; however, this information is only gained from a pre-existing map of the environment.

This report contains market size and forecasts of Simultaneous Localization and Mapping (SLAM) in Global, including the following market information:
