Abstracts

Used to guard temperature sensors, thermowells are cylindrical fittings designed to integrate directly into the piping system. Typically categorized by the design of their stem, thermowells offer excellent protection against excessive pressure, material velocity, and corrosion for thermocouples, bimetal thermometers, thermistors, and other common sensors.

Thermowells also allow for easier sensor replacement. Since thermowells are closed to the surrounding flows, thermowells allow you to avoid the need to reroute or stop processing or drain system sections prior to replacement.
