Abstracts

Stainless steel is an iron-based alloy that usually contains chromium and Others elements that enhance material properties. Stainless steel offers high resistance to corrosion and oxidation at higher temperatures. This particular property can be attributed to the amount of chromium present in the alloy and owing to this particular property, steel products, such as pipes and tubes, are widely used in a variety of applications in many end-use industries. Stainless steel pipes are generally of two types: welded pipes and seamless pipes. Generally, more than 90% of the stainless steel pipes consumed are welded ones. Low cost and ease of manufacturing are the key reasons responsible for higher popularity of welded pipes over seamless pipes.
