Abstracts

Stationary drill presses referred to as table drill, is a small size, easy to operate, usually installed in the special work table to use a small hole processing machine. The drill hole diameter of a bench drill is generally less than 13 mm and generally less than 25 mm. The change of the spindle speed is generally realized by changing the position of the triangle belt on the tower belt wheel, and the spindle feed is operated manually. Flexibility, high speed, high production efficiency, easy to use, so it is part processing, assembly and repair work commonly used in one of the equipment. But because the structure is simple, the speed change part directly USES the belt wheel speed change, the maximum speed is high.
