Abstracts

Strip heaters are composed of a heating element, a protective sleeve or sheath, and mounting hardware. Radiant heater strip heaters can have fins to maximize surface area and heat transfer to the air. Strip heaters can be clamped or bolted onto objects or solid surface contact heating over large areas and are optimal for indoor applications. Steel strip heaters are an excellent industrial heating product. Using a temperature controller such as a mechanical thermostat makes them easy to control. Installing a bimetal thermostat on the heated surface is another cost-effective solution.
