The bevel machine is mainly used for processing straight bevel and round base of plate glass. Grinding head with Shanghai famous brand motor of high precision, low energy consumption, main transmission adopts stepless speed reducer, synchronous belt transmission, chain plate used after forging steel and heat treatment through special technology, increasing both before and after the guide strip are super wear resistant materials and strict processing technology, reduce the friction and the pressure plate, effectively enhance the service life of chain plate and strip, even in the case of no lubrication can to meet the requirements for a long time. There are a variety of lifting beam beveling machine, including the lifting of the front beam and the lifting of the back beam, the former beam lifting mainly, on behalf of the good glass machinery, specializing in the production of lifting beam beveling machine, the size of glass through grinding. Generally, there are 9 grinding head /10 grinding head /11 grinding head hypotenuse machine, which is divided into large and small pieces of hypotenuse machine. The minimum processing size of large hypotenuse machine is 100 X100mm, and the maximum bevel width is generally 35mm, with an Angle of 3-25°. The minimum machining size of the small slice hypotenuse machine is 30x30mm, the maximum hypotenuse width is generally 15mm, and the Angle is 3-25°. With the improvement of market processing requirements, in recent 2 years, the glass machinery manufacturers have developed and produced an elevating hypotenuse machine with a minimum size of 30X30mm, a processing Angle of 0-45° and a maximum hypotenuse width of 35mm. As soon as the machine was exhibited at the China glass exhibition, it was ordered by many customers at home and abroad.
