## Abstracts

Longitudinal Submerged Arc Welded pipe can express as LSAW steel pipe. LSAW steel pipe, a type of longitudinally welded steel pipe produced by using the double sided submerged arc welding method. LSAW steel pipe are welded tubular products made out of flat plates that are formed, bent and prepared for welding. LSAW are welded with a straight seam that runs length wise across the pipe. The LSAW pipe diameter range is larger than ERW, normally from 16 inch to 60 inch, 406mm to 1500mm.

SSAW Pipe (Spiral Submerged Arc-Welding Pipe), also called HSAW pipe (Helical SAW), welding line shape like a helix. It is using the same welding technology of Submerged Arc-Welding with LSAW pipe. Differently SSAW pipe is spiral welded where the LSAW is longitudinally welded. Manufacturing process is rolling the steel strip, to make the rolling direction have an angle with the direction of the pipe center, forming and welding, so the welding seam is in a spiral line.
