Sugar beet (*Beta vulgaris* L.) a plant root belonging to the amaranth family is cultivated in temperate regions, is rich in the concentration of sucrose. Sugar beet is native to Mediterranean region and is being cultivated in many countries such as the US, Russia, African countries, South American, and the Middle East, mainly for the sugar beet juice extract. Sugar beet juice extract is extracted from diced sugar beets by solid-liquid extraction method using water. Sugar beet juice extract is used mainly for the production of processed sugar which is one of the largest manufactured ingredients in the world. Sugar produced from the sugar beet juice extract accounts for roughly a third of the world's sugar production. Sugar beet juice extract is concentrated into thick juice for the production of sugar, which contains approximately 63% sugar. The thick sugar beet juice extract can also be used for the production of bioethanol. For the production of bioethanol, the thick juice can be fermented directly with the aid of yeasts.
