Abstracts

Reserves of sulphur are mainly in crude oil, natural gas, and sulfide ores. Most sulphur production is the processing of fossil fuels. About 80% of sulfur consumed was in the form of sulfuric acid, in turn, to make the phosphate fertilizers, ammonium phosphates etc. Sulphur is also used in many other industries including non-ferrous metals, pigments, fibers, carbon disulphide and agricultural pesticides

Petroleum and sulfide ores can be processed long distances from where they produced, therefore sulphur production may not be in the country to which the reserves attributed. For instance, sulphur from Saudi Arabian oil maybe recovered at refineries in United States.

The data is based on commercial sales of sulphur, self-use part not in data statistic scope.

Sulphur is the preferred spelling British English while Sulfur is the preferred spelling in American English. Sulfur equal to Sulphur in this report.
