Abstracts

Super alloy that exhibit excellent mechanical strength and creep resistance at high temperatures, good surface stability, and corrosion and oxidation resistance. They typically have an austenitic face-Center, and cubic crystal structure with a base alloying element of nickel, cobalt, or nickel-iron. The development of Superalloy has primarily been driven by the aerospace and power industries.

The corrosion-resistant Superalloy is widely used in extreme environments where tremendous heat and corrosion resistance is paramount to the integrity of the end product. Chemical and petrochemical processing, power plants, and oil and gas industries widely use this superalloy.

Many of the industrial nickel-based superalloy contains alloying elements, including chromium (Cr), aluminum (Al), titanium (Ti), molybdenum (Mo), tungsten (W), niobium (Nb), tantalum (Ta) and cobalt (Co).
