Abstracts

Superfine solder paste refers to the solder paste product with the particle size of alloy welding powder T6-T10 in the solder paste. With the continuous development of microelectronics and semiconductor industry, the chip size is getting smaller and smaller, and the packaging density is getting higher and higher. The traditional solder paste products of T4 and above have been difficult to meet the requirements of microelectronics and semiconductor packaging, and the solder paste products used in packaging are becoming 'ultra-fine' step by step.
