The automotive surround view camera system is an emerging automotive ADAS technology that assists the driver in parking the vehicle safely by allowing him/her to see a top-down view of the 360 degree surroundings of the vehicle. Such a system normally consists of four to six wide-angle (fish-eye lens) cameras mounted around the vehicle, each facing a different direction. From these camera inputs, a composite view of the surroundings of the vehicle is synthesized and shown to the driver in real-time during parking.
