## Abstracts

Synthetic ammonia refers to ammonia directly synthesized by nitrogen and hydrogen in the presence of high temperature, high pressure and catalyst. It is a basic inorganic chemical process. In modern chemical industry, ammonia is the main raw material of chemical fertilizer industry and basic organic chemical industry. Ammonia is mainly used in the production of nitrogen fertilizers and compound fertilizers, such as urea, ammonium nitrate, ammonium phosphate, ammonium chloride and various nitrogen-containing compound fertilizers. Ammonia, as an industrial raw material and ammoniated feed, accounts for about 1/2 of the world's output. Nitric acid, all kinds of nitrogen-containing inorganic salts and organic intermediates, sulfonamides, polyurethane, polyamide fibers and nitrile rubber all need to be directly made from ammonia. Liquid ammonia is commonly used as refrigerant.
