Abstracts

Growing awareness among people about tattoo removal lasers, ease of treatment with new tattoo removal lasers, faster recovery, less post-operative pain, and lesser side effects as compared to surgeries are few of the factors contributing to the rise in demand for laser technology over other options available for tattoo removal. Various advantages of laser treatment for tattoo removal have led to patients switching to these treatments over surgeries. This has resulted in an increase in the number of laser procedures, particularly among other aesthetic procedures over the years.
