Abstracts

An annular cutter is form of core drill used to create holes in metal. An annular cutter, named after the annulus shape, cuts only a groove at the periphery of the hole and leaves a solid core or slug at the center. TCT Annular Cutters are equipped with a spiral flute which creates optimum chip removal and makes seizure next to impossible. These carbide cutting tools are used to drill in hardened materials such as HARDOX steel, stainless steels and high tensile strength steel such as railway tracks.
