Abstracts

A Telehandler, also known as a telescopic handler, telehandler handler, teleporter or rough terrain forklift, is a vehicle with a telescopically extensible boom, which can extend forwards and upwards from the vehicle, so it can be fitted with various lifting. A telehandler often is a hybrid of the crane and forklift in terms of abilities and size. Telehandlers have several attachments, such as winch, pallet forks, muck grab, or bucket, and can be used for material handling, digging trenches, personnel elevation, and underground mine baskets. These benefits have helped manufacturers develop vast product portfolios that are pleasing to their customers, safe, and add value. Telehandlers are widely used in construction, agriculture, industry, mines and quarries, environment, logistics, and other markets.
