## Abstracts

A temperature switch is a device that functions in response to change in temperature. Temperature switch typically works like a normal electrical switch to on/off application. In this case, it is used to on or off at discrete process temperatures. Additionally, a pressure switch is also a form of switch that operates to provide systems with electrical feedback in response to measuring a rise or fall in pressure. These Pressure switches are used across a large range of industry and manufacturing applications. As per the working, pressure switch opens or closes a switch contact when a preset pressure is reached.
