Abstracts

Temperature labels are temperature monitors consisting of one or more small heat-sensitive indicators sealed under transparent, heat-resistant windows. They have advantages over other temperature monitoring solutions in that they don't require a power source to work, and so can provide accurate feedback in challenging circumstances. The labels allow you to quickly check if a product or area has been subjected to compromising temperatures, and so are sometimes used in where perishable or sensitive materials are stored. They are commonly found in pharmaceutical, food and medical applications.
