Abstracts

Thermal film lamination is the process of adhering a decorative film, usually on a printed paper surface. The decorative films, also known as 'Thermal lamination films', are extrusion coated with an adhesive. Thermal lamination films are widely used on different surfaces, such as that of photographs, maps, charts, posters, and engineering maps, among Others. Thermal lamination films are useful as they prevent a surface from becoming crease, abraded, or marked by grease. There is a global focus to manufacture thermal film laminating machines which are cost effective and easy to install. The objective is to produce multi-function thermal laminating machines which can be configured to laminate films of varying thickness.
