Abstracts

Threaded plug gages, also called thread plug gauges, thread gauges, or simply plugs, are used to check and inspect internal threads by attempting to mate the Go and No-Go gauge members to the threaded part. If the fastener turns on the gauge smoothly with no binding, the user will know it falls within the specific tolerance. All gauges are marked with nominal size and gauge type, and are right-handed unless stated otherwise. Thread plug gages are used to check tolerances of threaded parts according to a certain specification. These highly specific calibration tools are used to assure the assembly of mating parts and provide quality control and conformity to standards.
