The abrasion testing of materials such as metals, ceramics, composites, and thick coatings is carried out in order to ensure the abrasion resistance of materials. Tile abrasion testing refers to the capacity of a floor or tile to resist the wear causing due to movement of various materials, foot traffic or mechanical equipments. The wear on a tile depends on the materials carried on the surface. The use of tiles for various applications depends upon the traffic at the particular place. Thus the selection tile abrasion testing equipments depends on the traffic on the surface, weather conditions, water etc.
