## Abstracts

Tooth positioners are recommended to patients to achieve flawless alignment of the teeth as part of the final procedure in orthodontic treatment. Tooth positioner is a customized orthodontic appliance designed to provide better finishing results after the removal of braces. It helps close the gaps and spaces between the back of the teeth and accomplish tooth movement without braces. Tooth positioners are recommended by orthodontists for a duration of few weeks to achieve the final movement of tooth more efficiently than braces. Positioners are also used to correct slight rotation of tooth and to close orthodontic band diastemas.
