Abstracts

A hip replacement is an invasive surgical procedure, used to remove a diseased or fractured hip joint and replace it with an artificial joint or prosthesis. Osteoarthritis is one of the most common factors for hip diseases. Structures within the hip (such as the cartilage or bony joint surfaces) may get damaged due to overuse, trauma, or certain conditions, such as rheumatoid arthritis, tumors, and so on. This may lead to degenerative changes within the hip which can lead to osteoarthritis.
