Abstracts

The total phosphorus analyzer is suitable for the detection of surface water, groundwater, industrial wastewater, domestic wastewater and other water quality. Digest the sample with potassium persulfate (or potassium nitrate-perchloric acid) under neutral conditions. All the phosphorus contained is oxidized to orthophosphate. In an acidic medium, orthophosphate reacts with ammonium molybdate to generate phosphomolybdate heteropolyacid in the presence of antimony salt, which is immediately reduced by ascorbic acid to form a blue complex.
