Transformer for marine is a kind of electrical equipment used by ships. With the large-scale ships and the application of electric propulsion, the occurrence rate of transformers in the ship's electrical system changes greatly. In recent years, more and more ships have adopted AC high voltage power devices. Ship regulations usually recommend that the nominal system voltage of ships' AC high voltage devices is 3-15kv. Transformer cooling methods mainly include natural cooling or forced air cooling, oil immersion cooling and contact forced cooling.
