Abstracts

This report focus on Transformer Multi Dissolved Gas Analyzers. Dissolved Gas Analyzer is used to determine the concentrations of specific gasses dissolved in the oil. Insulating materials within transformers and electrical equipment break down to liberate gases within the unit. The distribution of these gases can be related to the type of electrical fault, and the rate of gas generation can indicate the severity of the fault. The identity of the gases being generated by a particular unit can be very useful information in any preventative maintenance program. Transformer Multi Dissolved Gas Analyzers can be used for the analysis of multi dissolved key fault gases in the transformer oil.
