Abstracts

Translucent Wood is a type of construction material that is produced by treating and compressing wood strips. Optical transparent wood is a type of wood veneer, wherein the lignin, a component of cell walls, is removed chemically. It is an environment-friendly material compared to its alternatives such as plastic and glass. Translucent wood is a preferred construction material by builders or architects owing to its excellent set of properties such as high optical transmittance, low thermal conductivity, outstanding toughness, and lower density compared to glass.

This report contains market size and forecasts of Translucent Woods in global, including the following market information:

Global Translucent Woods Market Revenue, 2017-2022, 2023-2028, (\$ millions)

Global Translucent Woods Market Sales, 2017-2022, 2023-2028, (Kiloton)
