Abstracts

Trastuzumab, a monoclonal antibody against Her2, blocks the growth of cancer cells by attaching itself to Her2, preventing epidermal growth factor from attaching to Her2. Herceptin also stimulates the body's own immune cells to destroy cancer cells. Clinically, it is mainly used for metastatic breast cancer with excessive expression of her-2. Monotherapy may be used for metastatic breast cancer that has received one or more chemotherapy regimens; It can be combined with paclitaxel to treat metastatic breast cancer without chemotherapy.
