Abstracts

Traumatic brain injury (TBI) is a nondegenerative, noncongenital insult to the brain from an external mechanical force, possibly leading to permanent or temporary impairment of cognitive, physical, and psychosocial functions, with an associated diminished or altered state of consciousness.

Traumatic brain injuries are usually emergencies and consequences can worsen rapidly without treatment. Doctors usually need to assess the situation quickly. Fast acting and effective tests to detect TBI will reduce hospital CT scans (the only current way to diagnose a TBI) by up to a third.
