Trifluoromethyl Trifluorovinyl Ether (CAS 1187-93-5) is a colorless gas under normal pressure, and its molecular formula is C₃F₆O. As a special fluorine-containing monomer, Perfluorinated vinyl methyl ether is widely applied in the development of new fluoroplastics and fluorine rubber with comprehensive performance. It can copolymerize with tetrafluoroethylene to form perfluorinated ether elastomer with properties of high temperature and strong chemical corrosion resistance. It can copolymerize with tetrafluoroethylene and vinylidene fluoride to form polyvinylidene fluoride ether rubber, peroxide cross-linked available, with excellent performance at low temperature. It can copolymerize with tetrafluoroethylene to form fluorine resin for melt processing; It is important raw material to synthesize new pesticides and benzene fluorouracil.
