Abstracts

The landing gear for the truck trailer refers to retractable supports that retain the height of the trailer while the tractor is removed. To support the trailer after it is decoupled from the prime mover, a pair of landing legs are mounted at the front end. Landing gear, also known as stabilizers, should have the sufficient ability to lift the loaded trailer, if necessary, with a gear system. The increasing demand for logistics creates a need for trucks and trailers, which has had a positive effect on the growth of the truck landing gear market.
