Abstracts

By controlling the intensity, brightness, etc. of each light source through software, it is possible to simulate the spectrum of any visible light band. Software-based support also makes freely programmable spectroscopy very easy to implement. Its built-in CMOS onboard spectrometer realizes closed-loop feedback, so that the spectral accuracy of the output can reach 99%. It has a wide range of applications in multispectral imaging, color science, biological microscopy, machine vision lighting, etc.
