Abstracts

Plastic liner carbon fiber fully wound cylinders (type IV): carbon fiber fully wound on the outside of the plastic liner. The advantages of type IV gas cylinder are: light weight, high strength, high hydrogen storage density, high structural efficiency and good fatigue resistance. Compared with Type III bottles, Type IV bottles have made a major improvement in lightweight. The lining is made of polymer material, which is lighter than the metal lining. The body of the bottle is fully wrapped by fiber-resin composite material. The package is in the form of a mixture of bipolar and spiral layouts.
